

Live OnSet Stream W/ Sound

a 1-time multistep security process.

Turns any iOS device into a wireless on-set monitor with a very low latency of just 1.5 frames for live and playback streaming. In addition to dual camera monitoring, the directors device can use the talkback feature to communicate with operator when they are not at a monitor station. Department heads and key crew can also pull screengrabs directly to their device, speeding the company's efficiency and accuracy. A total of 16 devices can be added at the production companies discretion through

Intuitive Playback

After each recording, QTAKE HD can automatically switch from LIVE to DISK mode, making your shot review just a click away. The operator can also insert markers and chapters during recording and use multiple in/out points for series takes to speed up the playback process.

Dallies Integration/Distant Review

While recording original signals, QTAKE HD can simultaneously record processed frames to create streamable dailies. Producers, Directors, and Editorial departments can review shots at a distance moments after they are captured. This can save money and time!

Camera Metadata Capture

Digital Cinema cameras embed additional information into SDI line's signal. QTAKE HD can read this data and store it to improve project workflow. By reading camera media filename, QTAKE HD files can be used for conform-ready offline editing.

TouchScreen On-Set Editing

Check the action timing or continuity at lunch or between setups. QTAKE HD features intuitive single-track NLE capable of dual-view trimming to help you visually adjust every cut. Our QTAKE cart also has a full Adobe Creative Cloud Suite loaded and ready rock (i.e.. After Effects, Premiere, PhotoShop, etc).

Realtime Composite

With QTAKE HD you can prepare your VFX shots with ease. Create real-time 2 layer composite with various blend-modes, blue/green-screen keying or wipe transition. You can also use any two sources for overlay, live or disk, to check continuity and frame accuracy.

Live Color Correction

Digital cameras usually provide flat, low contrast output. QTAKE HD can perform realtime color grading using industry standard CDL color corrections. In addition you can import and apply 3D Luts, that will be stored separately for each clip.

PDF Reporting

Export shooting reports with thumbnails and metadata to PDF documents. Reports will include every important piece of meta-data associated with media captured to the camera. Filter clip selection by shooting day, scene and other clip properties.
